### Description

#### For the highest demands

The intrinsically safe pressure transmitters of the IS-2x series are ideally suited to applications in hazardous areas. These pressure transmitters have been specifically designed for the highest industrial requirements and feature the relevant worldwide approvals of ATEX, FM, CSA and a SIL rating.

#### Design

All wetted parts are manufactured from stainless steel and are fully welded. Internal sealing elements are completely avoided, so that the unit can be used with all media. The robust case is also made of stainless steel and provides a minimum ingress protection of IP 65. IP 68 versions are also available.

The IS-21-x models are particularly suitable for the measurement of viscous or contaminated media. Due to the flush diaphragm of the process connection, trouble-free pressure measurement is ensured at all times.

The field case of the model IS-2x-F enables operation in extreme environmental conditions and is resistant to acids, bases, oils and solvents. Via the field case connection integrated into the case's head, the electrical cabling can be installed quickly and easily.

#### Voltage supply

It is recommended that the pressure transmitter is powered via a suitable Ex isolated barrier. An ideal voltage supply is offered by the model KFD2-STC4-EX1 isolated barrier, see "Accessories".
